ASTRAVITAL

Crew Health & Care System · crew self-monitoring workspace

MISSION TIME

--:--:-- UTC

--

DEVELOPMENT BUILD · SYNTHETIC DATA ONLY · NOT A MEDICAL DEVICE OR DIAGNOSTIC SYSTEM. Do not upload real crew health records; secure storage and clinical validation are not implemented.

01 / CREW IDENTITY

Daily self-check

Crew member · roster ID

Kaleb Vance (Commander) — ASTRO_01_KALEB

Sleep during last rest period (hours)

8

Self-rated fatigue (1 low – 5 high)

3

How would you rate your wellbeing today? (self-reported only)

★ ★ ★ ★ ★

Choose a rating. This color reflects the crew member's own response only.

Optional context (avoid identifying or sensitive details)

Short note for your own review

Complete today's check-in

02 / TODAY AT A GLANCE

Personal status summary

DATA INCOMPLETE

Sleep

—

hours · self-reported

Fatigue

—

self-rating / 5

Wellbeing

—

crew rating / 5

Wearable file

None

No records loaded

Wearable record trends

Upload a normalized CSV file to view descriptive values and trends. No medical cutoffs are applied.

No wearable file loaded.

03 / WEARABLE DATA

Load a crew wearable record

CSV file · one record per metric and timestamp

Choose File No file chosen

Process file locally Download CSV format Clear loaded data

File contents stay in this page session; they are not sent to a server or saved.

Required CSV columns

```
timestamp,crew_id,metric,value,unit,source
```

Supported metric names: sleep_hours, heart_rate_bpm, respiratory_rate_bpm, body_temperature_c, personal_co2_ppm, radiation_dose_mSv. Match crew_id exactly to the roster ID. This is an AstraVital import format, not a NASA or wearable-vendor standard.

04 / USER GUIDE

Interpret the display

Workflow status

CHECK-IN COMPLETE means the required self-check fields were completed. **TREND TO REVIEW** means imported records contain a descriptive time-series to inspect. **DATA INCOMPLETE** means a required self-check value or valid data is missing.

Star color · self-reported wellbeing only

1–2 red: NEEDS ATTENTION
3 amber: MODERATE / CHECK IN
4–5 green: FEELS WELL

The star color summarizes the astronaut's own rating. It is not calculated from wearable values and does not diagnose or establish fitness for duty. Any concern should follow the mission-approved care procedure.

NASA's ISS research has used wearables to study sleep, heart and breathing patterns, and temperature; separate crew-worn or personal monitors have studied cabin CO_2 and radiation exposure. Those investigations support the relevance of these possible data streams but do not establish a standard upload format or validate AstraVital's analysis. This page currently processes only the CSV fields above using descriptive summaries; it does not interpret these signals as a diagnosis. NASA: Wearable Tech for Space Station Research. NASA has not endorsed AstraVital.
